

CABLE REEL TURNER

The CRT can rotate any flanged cable reel on a smooth, flat floor. The rotation principal is that one flange remains on the ground while the other flange is rotated around it. The newly designed CRT includes a new center axle that tracks more accurately when the reel is turned. This reduces the friction and force required to turn the reel.

The Cable Reel Turner provides an innovative solution to turn and rotate cable reels. To use, simply place the CRT in front of one of the reel flanges and use a PowerRoll machine to push the reel onto the CRT. Manually push or pull the reel flange that is loaded onto the CRT so that the reel pivots on the opposite flange while the CRT moves in an arc. Turn the reel until the desired orientation is reached. An alternate way to turn the reel is to use a long bar inserted through the spindle hole of the reel to apply a turning force to turn the reel. Use the PowerRoll machine to unload the reel by pushing it in the opposite direction to unload.

PowerHandling Cable Accessories are designed to complement each other! Pair the CRT with our Cable Chock Stop to better control the load.

Load Capacity

5000 lb (2267.96 kg)

Reel Diameter

1m (40") - 1.6m (65")

Reel Flange Width

115mm (4.5")

Servicing the Americas and Asia-Pacific Region
