

CART MOVING

THE NEXT GENERATION OF INDUSTRIAL CART MOVERS

The **PowerCart L-Series** is an innovative machine designed to power your existing carts. It can quickly engage with most carts using a manual hydraulic lift system to easily move loads up to 1,500 lbs., allowing simple and ergonomic powered movement for any operator. The PCL is the most maneuverable cart mover on the market, does not require a cart side hitch, and can travel up to 3.5 mph with variable speed control. The PCL uses removable rechargeable Li-ion batteries that charge off-machine so the PCL is never down due to a depleted battery.

Adjustable and custom lifting platforms allow for variable connection configurations and heights to connect to virtually any type of cart.

Suitable for: HEALTHCARE,
GENERAL MANUFACTURING,
FOOD AND BEVERAGE
MANUFACTURING,
WAREHOUSE, AND MORE.

POWERFUL

ERGONOMIC
